Selected Key Publications of Keiichi Umetsu

My research interests and expertise lie in the fields of observational cosmology and astrophysics, with a particular focus on understanding the nature of dark matter and its role in cosmic structure formation. I am most recognized for my observational work on galaxy clusters and dark matter utilizing gravitational lensing and complementary astrophysical data sets. In addition to my independent research, I have been an active contributor to several international collaboration projects. I have taken a leading role in conducting weak gravitational lensing studies of galaxy clusters using deep wide-field imaging observations in optical wavelengths. This unique blend of expertise, experience, and leadership has been instrumental in my research success.
